

CLUNK, CLUNK - SOUND FAMILIAR

Falcon BA-FG / Territory SX-SY models rear differential solution

Does your Falcon or Territory suffer from a noisy rear end clunk at slow speeds?
 Have you been back and forth with your dealership and still suffer from the issue?
 Have you changed your driving style to compensate?

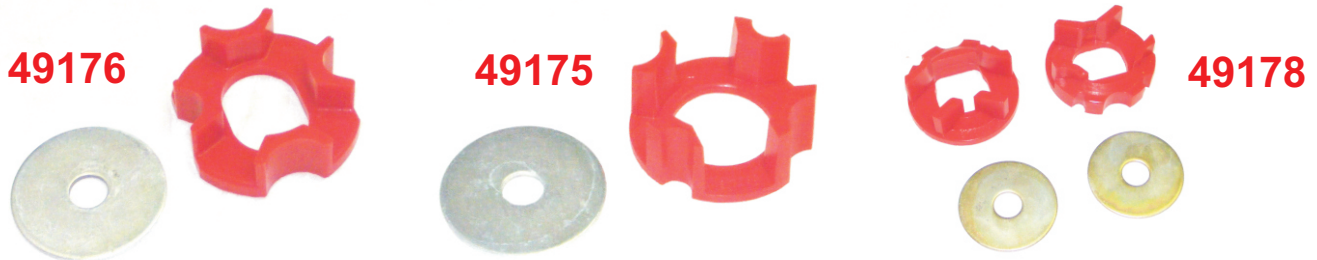

SOLUTION

There is a fix with the range of complete replacement bushings or void inserts for the Ford Falcon and Territory range.

Replacement Bushes - highly durable and heavily voided polyurethane bushings come with new mounting components to counter the over compliant or delaminated OE bushing and limited OE through bolt engagement.

Void Inserts - are a quick and cost effective way of fixing the problem with out having to completely replace the bushes. These inserts have been designed to completely fill the original voids of the OE bushes. For general replacement, fitting just the front insert to the OE bush is sufficient, but if you have a XR6 Turbo, XR8, V8 or FPV we strongly recommend fitting inserts to the front and rear of the OE bush.

Location	Model	Type	Notes	Part #
Diff mount - front	Falcon BA-BF / Territory SX-SY	Replacement Bush	replaces steel shell original	49158
Diff mount - front	Falcon BF / Territory SX-SY	Replacement Bush	replaces resin shell original	49160
