

# Adjustable Panhard Rod

## Part No. 48153

Holden Commodore VB - VS (without IRS), Toyota Lexcen VN - VS (without IRS)  
and Holden Gemini TX - TG. (Excluding Panelvan)

### Are your tyres experiencing excessive wear?

This could be due to poor axle alignment. What to look for:

- Tyres rubbing on body panels
- Twisted body mounts
- Heavy loads
- Wide wheels
- Sports suspension (raised or lowered) kits
- Excessive body shift when cornering

### Nolathane has you covered!

Nolathane's new Adjustable Panhard Rod part no. 48153 locates the axle to the body, which limits sideways movement of the axle. The panhard rod is fastened to the body at one end and to the axle at the other.

Nolathane's Adjustable Panhard Rod has been designed to pivot in an arc, moving up and down as the forces are applied. This adjustable panhard rod allows the suspension specialist to correct the settings for precision axle alignment.

### Nolathane's Adjustable Panhard Rod 48153 offers the following features:

- Australian designed and engineered.
- Built to perform - with heavy-duty construction and fine internal threads allowing more accurate wheel alignment adjustment. Also fully adjustable on car.
- Designed to suit modified vehicles (lowered or raised).
- Equipped with Nolathane bushes, and will accept original bushes as well.
- Profiled to give clearance on "big bore" exhaust systems.
- Powder coated for protection against the harsh Australian elements.
- 2year/40,000 km Warranty
